

SAM PROJECT

SURVEYS TO UNDERSTAND ASYLUM RELATED-MIGRATION

Speaker - Sara Henriques
Research team - Teddy Wilkin, Constantinos Melachrinos,
Cinzia Spinazze, Sara Henriques

Data Analysis and Research Sector
European Asylum Support Office

Who We Are?

EASO's Research Programme

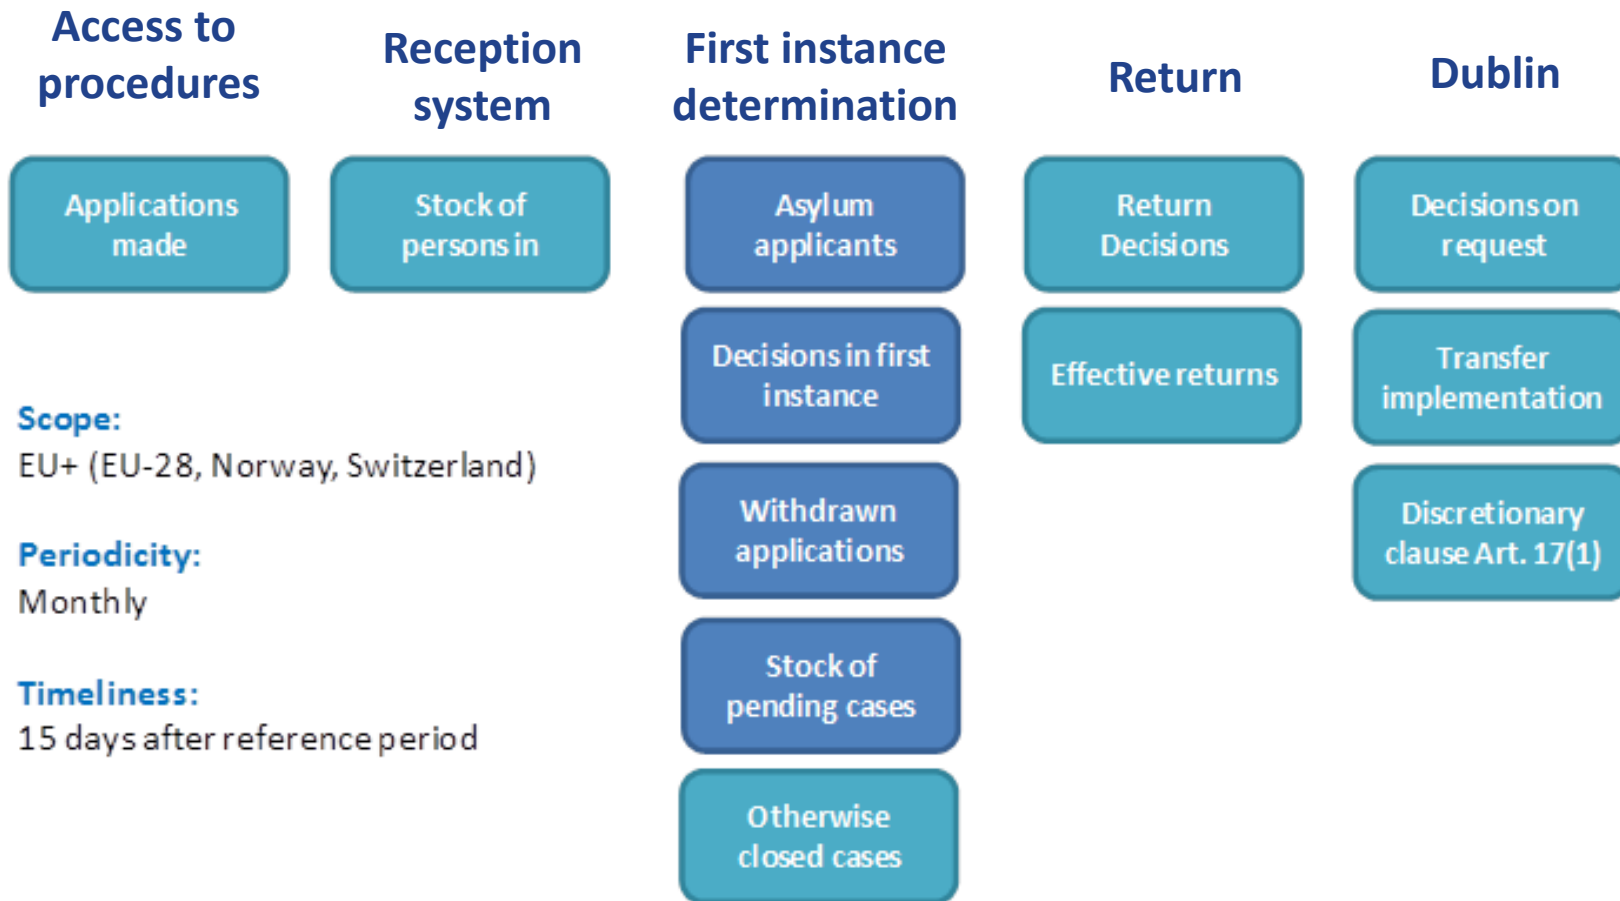

Surveys' Research Project

Surveys to research asylum-related migration

Asylum data

Early warning and Preparedness System (EPS) - a data collection system that gathers information on relevant indicators in all key stages of the Common European Asylum System (CEAS).

Why surveys?

Data collected directly from asylum seekers

Gaps in knowledge

Detailed data on journey, expectations, etc

Reliability of information (anonymity may improve the report of sensitive data)

Asylum situation is a dynamic, continuously changing situation

Large representative sample

EASO Surveys project

Previous work

GOAL:

- Test technical and logistical aspects,
- Test the feasibility,
- Explore different methods, procedures and strategies for setting up a permanent system of data collection with surveys.

2017

Call for tender

Call for tender and award for a feasibility study and review of available survey

2018

Feasibility study and Review of available surveys

Surveys Advisory Group

2019

Drafting and launching of the call for tender; Selection and contract award

2020

Survey project kick off BE, FR, NO

A review of empirical surveys of asylum-related migrants

*EASO – by University of Siena and Kantar Public Brussels

Access here: <https://www.easo.europa.eu/sites/default/files/easo-review-surveys-1-2.pdf>

- **Goal – review research designs, methodology, advantages/ disadvantages**
- **N = 157 studies/ 2000 – 2017**
- **76% are single country studies/ 24% were multi-country**
- **Germany, France, UK, Greece, Italy, Spain, Malta**
- **Substantial lack of accurate sampling frames**
- **Non-probability sampling methods (snowball and purposive samplings)**
- **Varied sample sizes (100 – 5000)**
- **Face-to-face interviews (either CAPI or PAPI)**
- **Translation to asylum-seekers native-speaking languages**
- **Importance of having a pilot study**

Feasibility Study Report: Survey among Asylum-Seekers in EU

*EASO – by University of Siena and Kantar Public Brussels

- **Level of cooperation of national asylum authorities**
- **Hard-to-reach population (most surveys used non-probability sampling methods)**
- **Use of complete registers of asylum-seekers**

- **National Asylum Authorities**
- **Short query (interest, n=11) & Questionnaire (specific features of reception centres, n=6)**
- **Asylum-seekers can be reached by mail and phone (DP issues)**
- **Face-to-face VS Online ?**
- **Factors to decide: encouragement/ engagement of having an interviewer, social presence, length of the survey, control, social desirability effect, primacy and recency effects, interviewer effect, participation rate, non-response bias, self-administered, literacy, digital divide, costs, mixed methods**

Collecting testimonies directly from asylum seekers – the pilot study

ftf by native speakers (EN, FR, AR, Dari)

Adult third-country nationals or stateless persons who are first time asylum applicants, beneficiaries of international protection, previous applicants who received negative decisions

N ~ 2000

Belgium 400; France 1300; Norway 300

3 MS – FR, BE, NO

Diversity in terms of geographical scope, asylum flows, reception centres, population N

Challenges:

Hard to reach study population,
High turnover of individuals residing in RC,
Obtaining a representative sample,
Quality/veracity of responses,

SAM - Surveys with Asylum-related Migrants

COVID19 Pandemic
Alternative approach?

2016-2020

SAM 1 – surveys

- ✓ Feasibility study
- ✓ Review of available surveys
- ✓ Surveys Advisory Group
- ✓ Contract and survey kick-off

2020-Onwards

SAM 2 – online surveys

- ✓ Scoping review
- ✓ Pilot study
- ✓ System development study

SAM2 - Conducting online surveys with asylum-related migrants

- ✓ Online Survey
- ✓ Internet / smartphones

SAM2 Project

Stage 1: Preparatory

Lessons learned from SAM1
Scoping review
Reception Network Survey

Stage 2: Pilot project

In-house study
Test feasibility of using online surveys
with asylum-related migrants

Stage 3: System Development

EU+ countries
Online survey
Representative sample

**Stage 1:
Preparatory Phase**

❖ **Lessons learned from SAM1**

❖ **Reception Network Survey**

❖ **Scoping review**

Reception Authority Results

Survey to MS Reception Centres participating in the EASO's Reception Network

01 Main goals

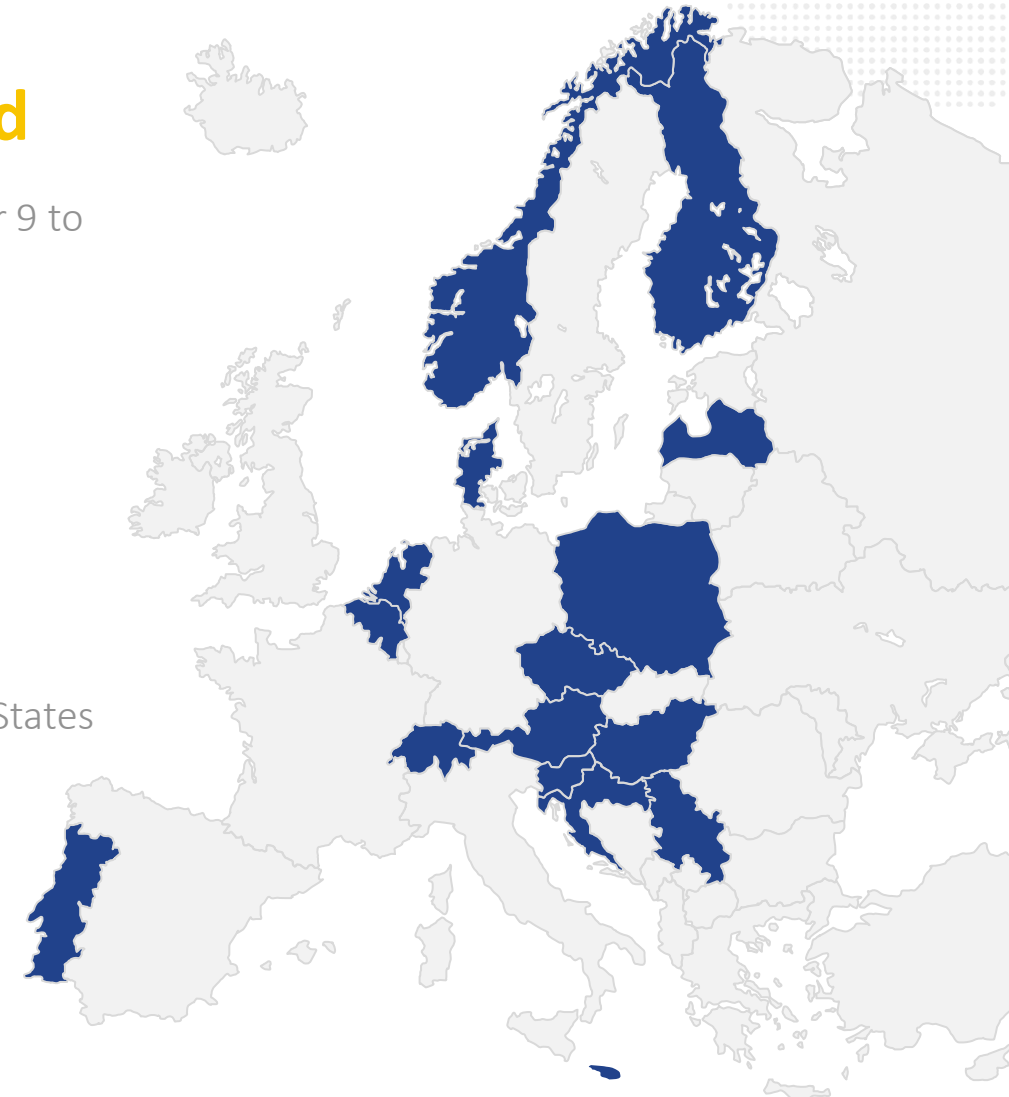

- To explore whether RC have used before online surveys with asylum-related migration;
- To understand best practices of using online surveys with this population: communication channels, survey software, residents' database, topics of interest from RC's perspective, willingness to support EASO).

02 Time period

Available from November 9 to
December 4

03 Sample

17 RC from 16 member States

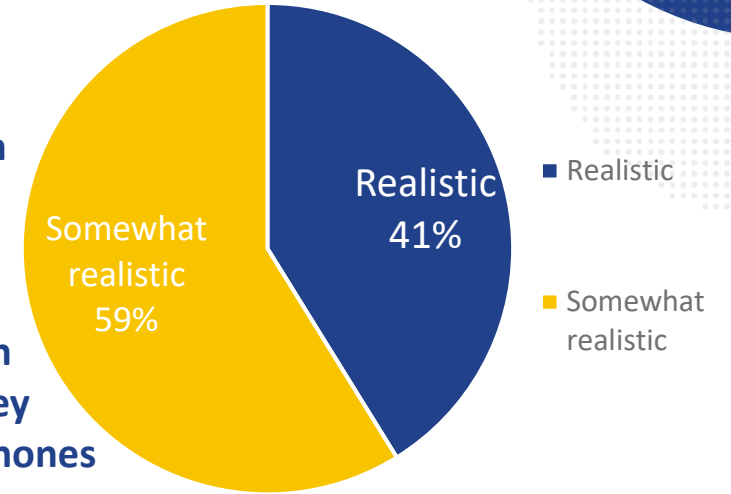

Reception Network Results

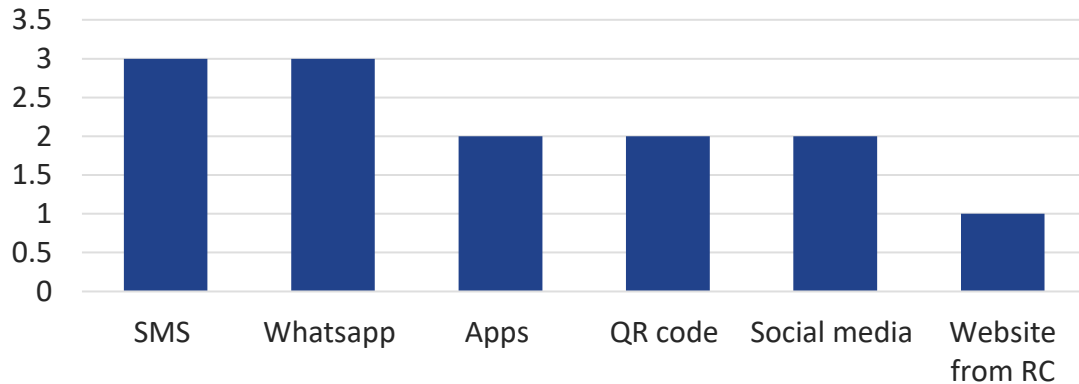

Already used online surveys

With residents and asylum-seekers and people with international protection status, Used contact numbers.

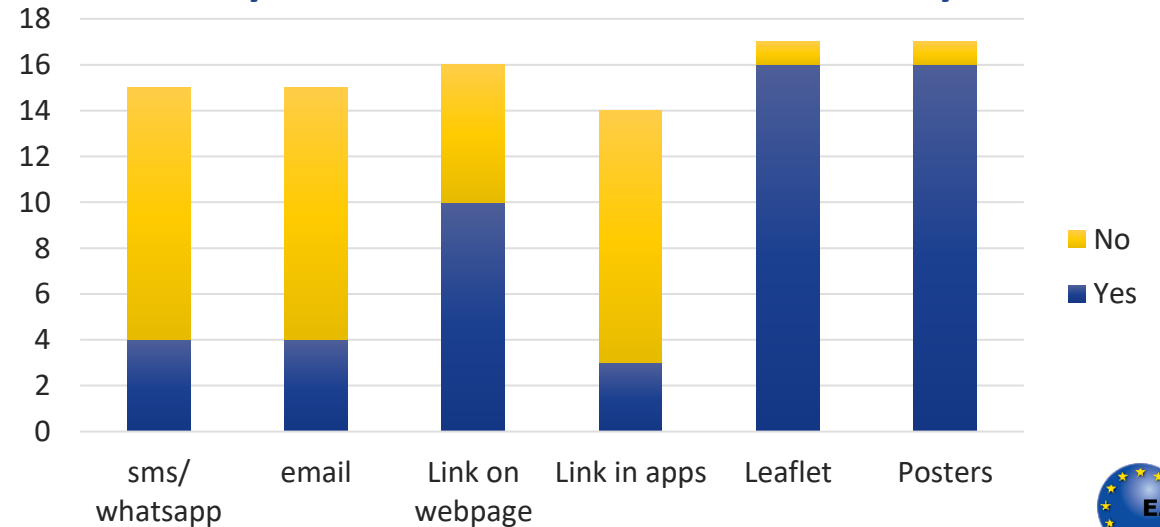

Residents in reception centres will be able to complete an online survey via smartphones

Which tools have been used to contact them?

Would you be available to share the survey?

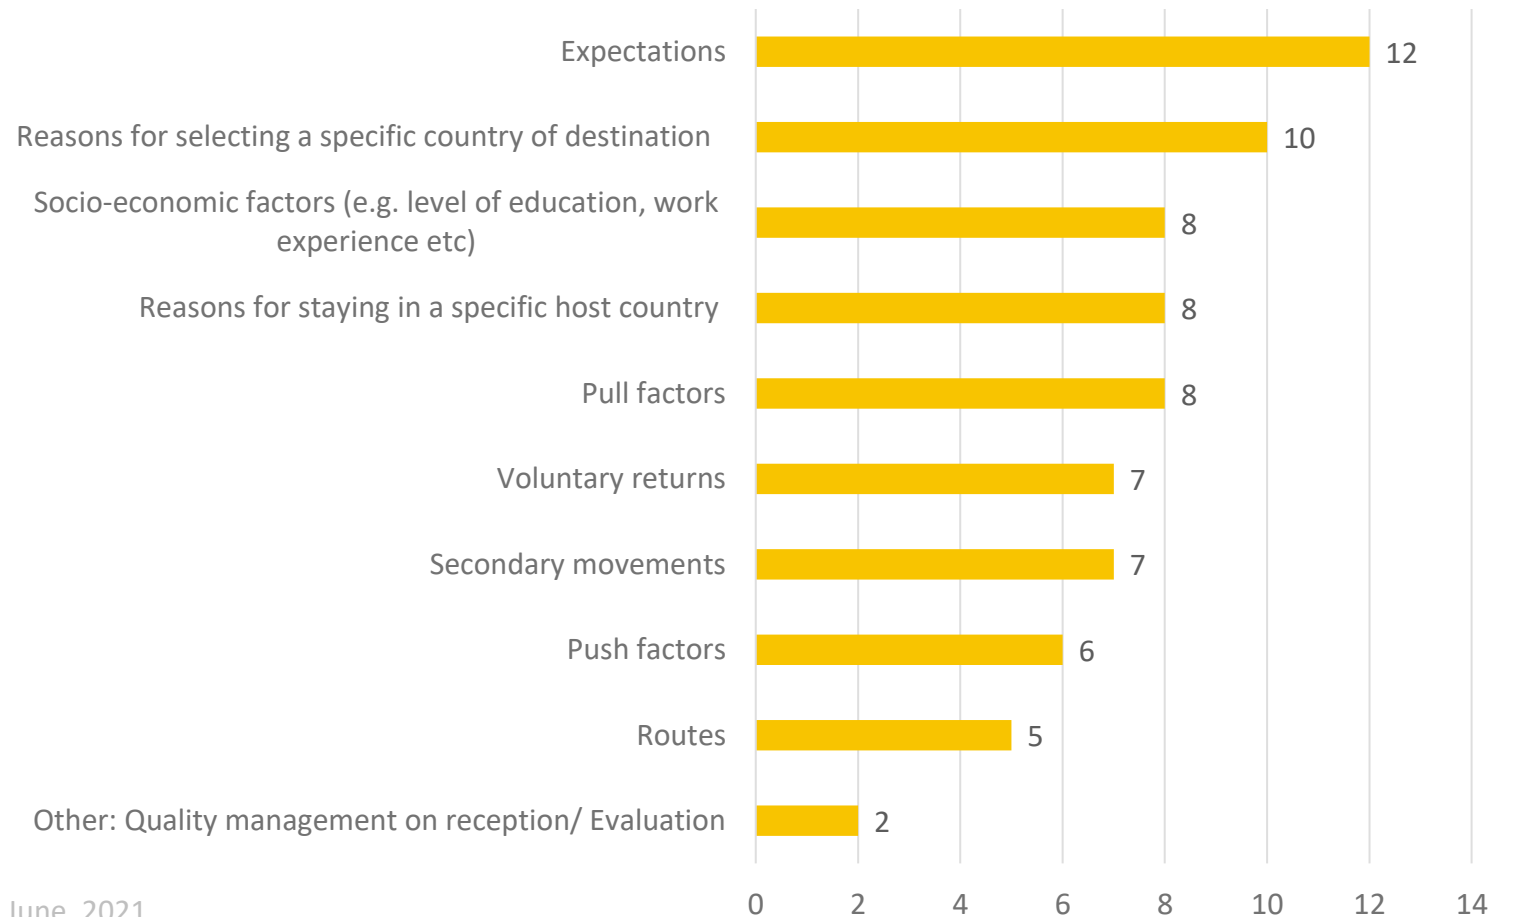

Reception Network Results

EASO is going to conduct an online survey among asylum seekers in reception centres, would you be interested in joining the project?

Yes N = 14

No N = 3

Which topics would you prioritize for online surveys?

Scoping review

Literature review on conducting online surveys with asylum-related migrants

GOALS:

- To aggregate and explore the best available scientific evidence on researching asylum-related migrants employing online surveys.
- To map existing studies that survey asylum-related migrant populations using online surveys.
- To review the main methodological aspects of these studies.
- To inform SAM2 project

Method:

- Joanna Briggs Institute's methodology for scoping reviews.
- Protocol development.
- Search strategy.
- Eligibility criteria.
- Data extraction and data synthesis

Scoping review results

N= 18
2017 - 2020

Stage 1:
Preparatory Phase

Scoping review results

Questions that remain to answer:

Length of the questionnaire

What is the most appropriate length?

Distribution strategy

Use community members or organisations or both?

Incentives

What is the impact of using incentives?

Branding

What is the impact of associating a survey with an organization in field of asylum?

Stage 2: Pilot project

- ❖ In-house study
- ❖ Exploratory study - feasibility
- ❖ Experimental study – survey
distribution and sample
recruitment strategies

Pilot Study – Research Design

- To test the feasibility of conducting online surveys with asylum-related migrants (survey software, field and population characteristics, real-time dashboards, etc)
- Test the best distribution and sample recruitment strategies to promote response rate (incentives, length, branding, etc)

Phase 1: Exploratory design to test feasibility

- Feasibility
- Software testing
- Fieldwork testing
- Population characteristics
- Questionnaire testing
- Data analysis and report testing

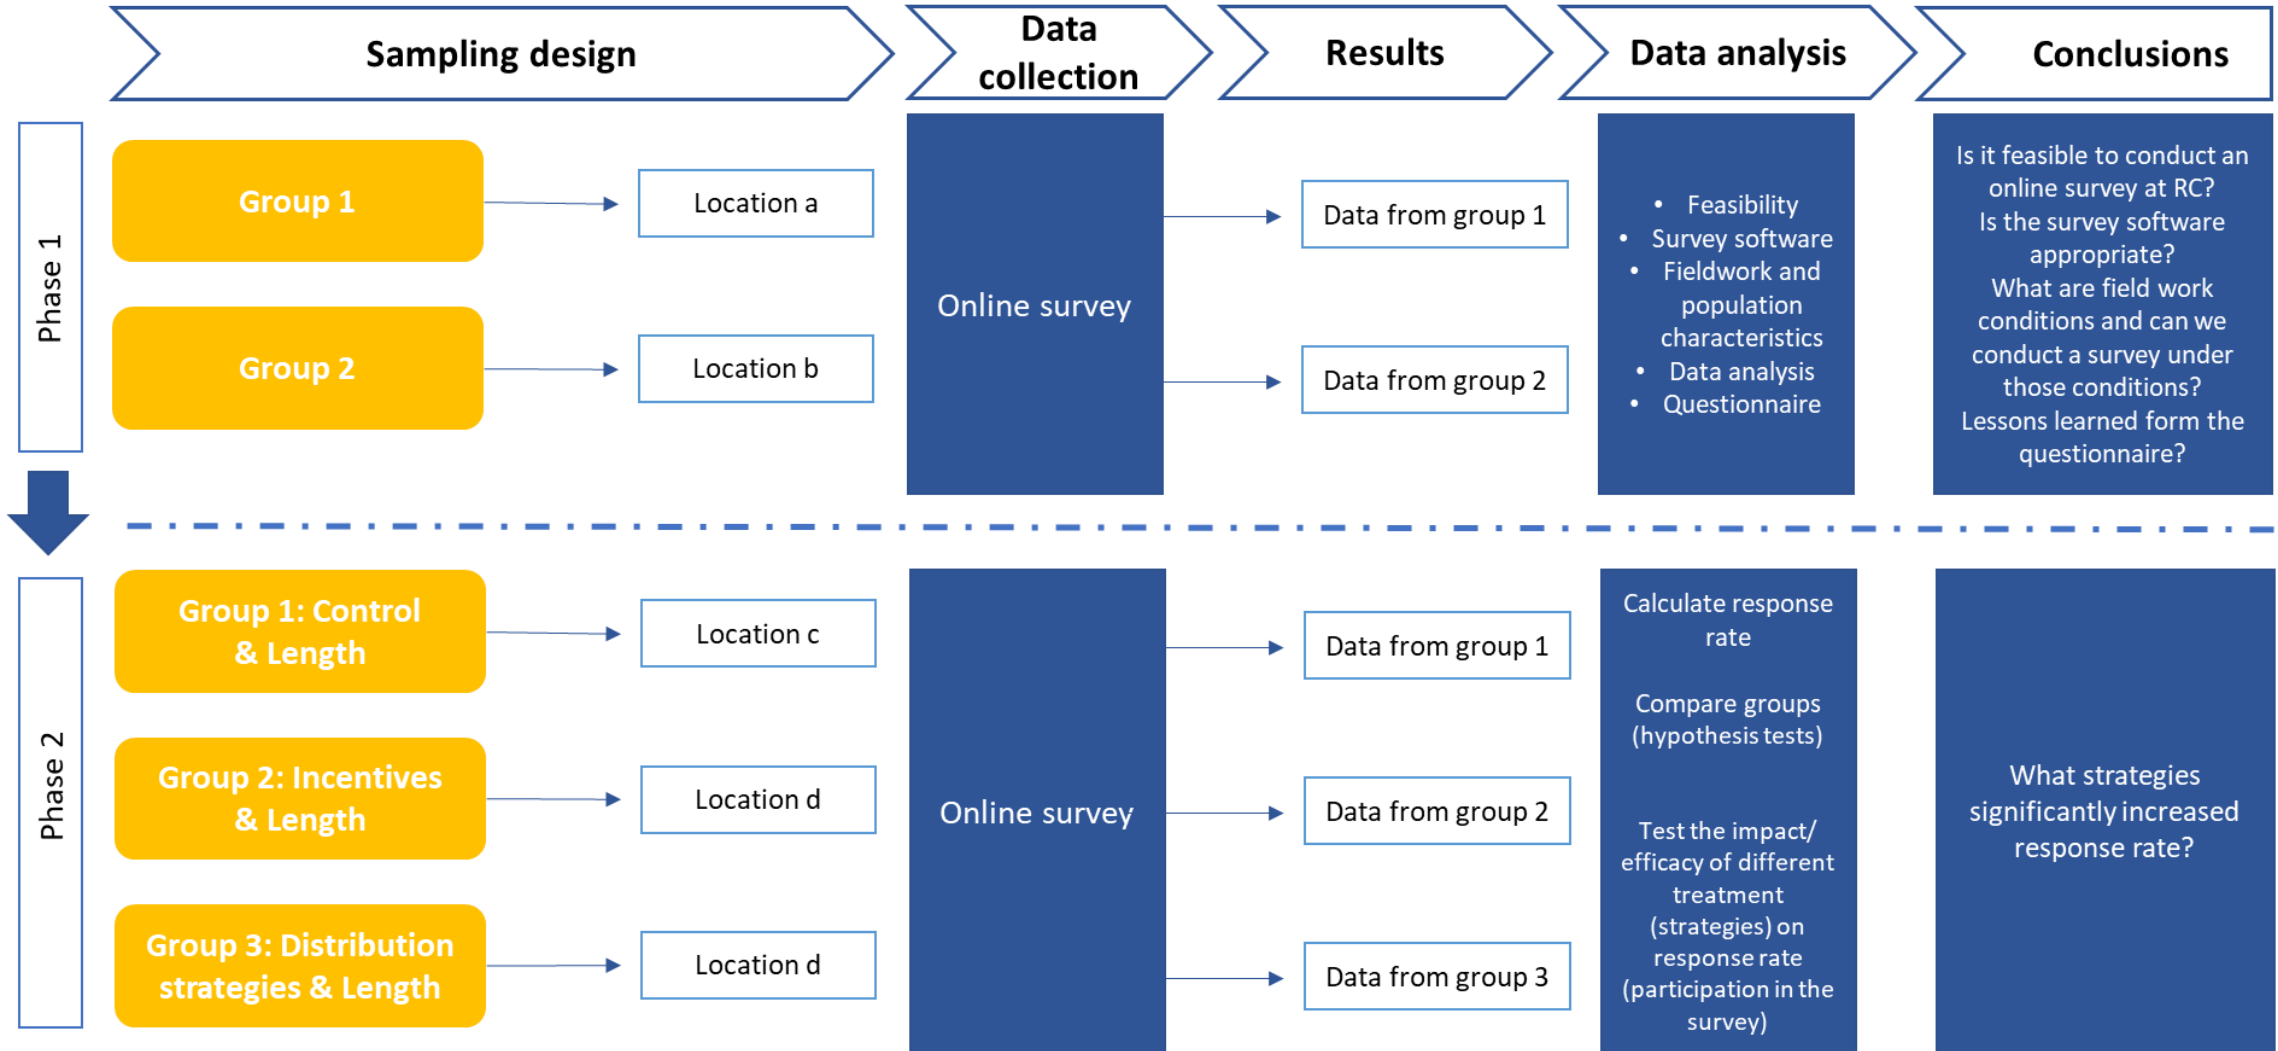

Phase 2: Experimental design to test sample recruitment and distribution strategies

- Test the use of incentives
- Test distribution strategies: involving community leaders
- Test distribution strategies: branding and other institutions and NGOs
- Test the length of the questionnaire

Pilot Study – Research Design

**Stage 3:
Strategic study**

- ❖ **System development /
established monitoring tool**
- ❖ **Real-time data analysis and
data visualizations**

Strategic Study – System development

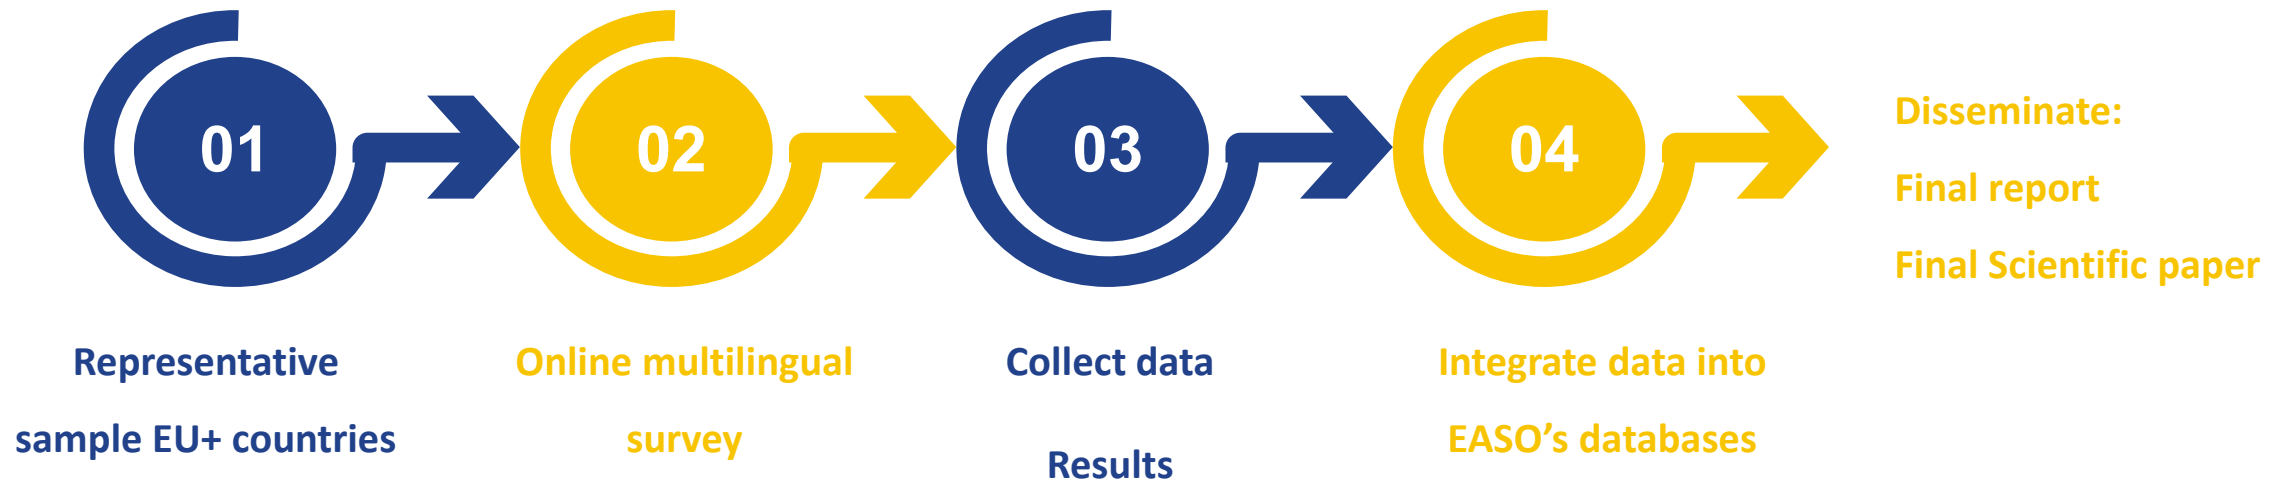

Set-up of a permanent system in the EU+ countries that regularly collects data directly from asylum applicants and people with international protection status in reception centres
Standardised and comparable data.

Data collection is collected and transferred to EASO in real-time and easily integrated into EASO's existing informational systems and DB
Real time analysis and dissemination of results

Strategic Study – System development

New established monitoring system to collect data directly from asylum seekers across EU+ countries

THANK YOU
